Patent No. 5756684

GENERAL INFORMATION:
APPLICANT: Johnson, Edward M.
APPLICANT: Bergemann, Andrew D.
TITLE OF INVENTION: CLONING AND EXPRESSION OF PUR PROTEIN
NUMBER OF SEQUENCES: 51
CORRESPONDENCE ADDRESS:
ADDRESSE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                     FEATURE:

Sequence 33, Application US/09716161A

Patent No. 6355482

GENERAL INFORMATION:

APPLICANT: Susan M. Freier

TITLE OF INVENTION: ANTERSEE MODULATION OF INTEGRIN BETA 4 BINDING PROTEIN EXPRESSION

CURRENT APPLICATION NUMBER: US/09/716,161A

CURRENT FILING DATE: 2000-11-07

SEQ ID NO 33

LENGTH: 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 40, Application US/09277078

Sequence 40, Application US/09277078

Patent No. 6312949

GENERAL INPORMATION:
APPLICANT: Sakurada, Kazuhiro
APPLICANT: Palmar, Theo
APPLICANT: Palmar, Theo
APPLICANT: Gage, Fred H.
TITLE OF INVENTION: REGULATION OF TYROSINE HYDROXYLASE
TITLE OF INVENTION: REGULATION OF TYROSINE HYDROXYLASE
TITLE REFRENCE: 07251/031001
CURRENT APPLICATION NUMBER: US/09/277,078

CURRENT FILING DATE: 1999-03-26
NUMBER OF SEQ ID NOS: 60
SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NO 40
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0.4%; Score 16.8; DB 1;

patent No. 6143504

GENERAL INFORMATION:

APPLICANT: LEDBETTER, DAVID H.

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE DIAGNOSIS OF FRAGILE X

TITLE OF INVENTION: SYNDROME

TITLE OF INVENTION: WINDER: US/09/429,499

CURRENT APPLICATION NUMBER: US/09/429,499

CURRENT FILING DATE: 1999-10-27

NUMBER OF SEQ ID NOS: 15

SEQ ID NO 14

Sequence 104, Application US/09475947A

Patent No. 6472154

GENERAL INFORMATION:
APPLICANT: Garner, Harold R.
APPLICANT: Wren, John D.
TITLE OF INVENTION: Polymorphic Repeats in Human Genes
FILE REFERENCE: USD0667

CURRENT FILING DATE: 1999-12-31

NUMBER OF SEQ ID NOS: 346

SEQ ID NO 104

LENGTH: 18

LENGTH: 18

TYPE: DNA

ORGANISM: human
US-09-475-947A-104
TITLE OF INVENTION: Genomic Instability
NUMBER OF SEQUENCES: 38
CORRESPONDENCE ADDRESSE:

                                                       Sequence 11, Application US/09490774

Patent No. 6262036

GENERAL INFORMATION:

APPLICANT: Arnold Jr., Lyle J

APPLICANT: Reynolds, Mark A

APPLICANT: Giachetti, Christina

TITLE OF INVENTION: Chimeric Oligonucleoside Compounds

NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:

ADDRESSEE: Lyon & Lyon

STREET: 611 West Sixth St.

CONTY: Los Angeles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0.4%; Score 16; DB 1; Length 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                      Sequence 11, Application US/08960111

Patent No. 6060456

GENERAL INFORMATION:

APPLICANT: Reynolds, Mark A

APPLICANT: Reynolds, Mark A

APPLICANT: Giachetti, Christina

TITLE OF INVENTION: Chimeric Oligonucleoside Compounds

NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:

ADDRESSEE Lyon & Lyon

STREET: 611 West Sixth St.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0.4%; Score 16; DB 1; Length 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 35, Application US/08734973

Patent No. 5912147

GENERAL INFORMATION:
APPLICANT: Stoler, Daniel L.
APPLICANT: Anderson, Garth R.
TITLE OF INVENTION: A Rapid Means For Quantitating
TITLE OF INVENTION: Genomic Instability
NUMBER OF SEQUENCES: 38
CORRESPONDENCE ADDRESS:
ADDRESSE: Hodgson, Russ, Andrews, Woods & Goodyear
STREET: 1800 One MAT Plaza
CITY: Buffalo
STATE: New York
COUNTRY: United States
ZIP: 14203-2304

COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette, 3.5 inch
COMPUTER READABLE FORM:
MEDIUM SYSTEM: MS-DOS/ Microsoft Windows
SOFTWARE: Wordperfect for Windows
CURRENT APPLICATION NUMBER: US/08/734,973
FILING DATE: October 1996
ATPORNEY/AGENT INFORMATION:
NAMME: NAISON M. Bud
NAMME: NAISON M. Bud
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Russ, Andrews, Woods & Goodyear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Mismatches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                    RESULT 281

US-09-496-694B-235

Sequence 235, Application US/09496694B

Patent No. 6335194

GENERAL INFORMATION:
APPLICANT: C. Frank Bennett
APPLICANT: Eric E. Swayze
APPLICANT: Lex M. Coweert
TITLE OF INVENTION: ANTISENE MODULATION OF SURVIVIN EXPRESSION
FILE REFERENCE: ISPH-0439
CURRENT FILING DATE: 2000-02-02
PRIOR PILING DATE: 1999-04-05
PRIOR PILING DATE: 1999-04-05
PRIOR FILING DATE: 1999-04-05
NUMBER OF ERQ ID NOS: 249

SEQ ID NO 235
                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-08-584-040-4242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 320
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 24, Application US/08924870A

Patent No. 6143491
GENERAL INFORMATION:
APPLICANT: GI ckemann, M. Alexandra
APPLICANT: GI ckemann, M. Alexandra
TITLE OF INVENTION: THERAPEUTIC COMPOSITIONS AND
TITLE OF INVENTION: DIAGNOSTIC ASSAYS FOR TYPE II DIABETES INVOLVING HNF-1
NUMBER OF SEQUENCES: 28
CORRESPONDENCE ADDRESS:
ADDRESSEE: FOLEY, HOAG & ELIOT LLP
STREET: One Post Office Square
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Sequence 110, Application US/09780045

Patent No. 6602713

GENERAL INFORMATION:
APPLICANT: Brett P. Monia
APPLICANT: Brett P. Monia
APPLICANT: Acqueline Wyatt
TITLE OF INVENTION: ARTISENSE MODULATION OF PROTEIN PHOSPHATASE 2 CATALYTIC SUBUNIT BI
TITLE OF INVENTION: ARTRESSION
FILE REPERENCE: RTS-0130
CURRENT APPLICATION NUMBER: US/09/780,045
CURRENT FILING DATE: 2001-02-09
NUMBER OF SEQ ID NOS: 135
SEQ ID NO 110
LENGTH: 20
Sequence 5, Application US/09555889A
Patent No. 6429299
GENERAL INFORMATION:
APPLICANT: Bowler, Chris
Mustilli, Anna Chiara
TITLE OF INVENTION: Nucleotide sequence encoding the tomato light
TITLE OF INVENTION: Nucleotide sequence encoding the tomato light
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Robert J. Jondle
STREET: 555 13th Street NW, Suite 701-E
CITY: Washington
STATE: District of Columbia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
